

When Yancey Engineered Solutions was founded, the company's #1 priority was to establish a quality culture that produced services and merchandise of the highest quality. After years of process development, people investments, and continuous communication with our clients, we are proud to announce the accomplishment of another major milestone within our continuous improvement plan.

On April 7, 2009, Yancey Engineered Solutions received formal notification that we had attained accreditation to the internationally recognized quality management system standard, ISO 9001:2000.

We are particularly pleased to have earned this accolade on our first attempt. The accreditation of compliance with ISO 9001:2000 recognizes that the policies, practices and procedures of our company ensure consistent quality of the services and enclosures we provide to our customers. With this certification, our customers can be confident that YES is dedicated to maintaining the highest effectiveness and responsiveness in achieving our goal of total customer satisfaction.

We are the first power generation packaging and testing organization in the U.S. to achieve this highly sought after level of quality management. In working towards this award, we have analyzed and challenged every aspect of our operations, involving every employee and clients. This has resulted in many improvements to both what we do and how we do it. We are now a much more efficient and agile organization as a result of the quality journey we have taken. We proudly lead the way for quality packagers nationally.

We are delighted to achieve accreditation. We are proud to join more than 500,000 organizations across the globe that have established ISO 9001 as the preferred quality assurance standard. The award covers the full range of YES products and services. It has been a great experience in terms of teamwork. We are all happy to pass the good news of this validation of our commitment to quality and continuous improvement to our customers. We look forward to satisfying our clients even more in the future.

The award was made through Verisys Registrars, a world leader in assessing business processes and products against internationally recognized standards. Verisys emphasizes that ISO 9001: 2000 focuses on processes and customer satisfaction rather than procedures and so is equally applicable to service providers and manufactures.
